Domino V120i Printer Information Setting Guide
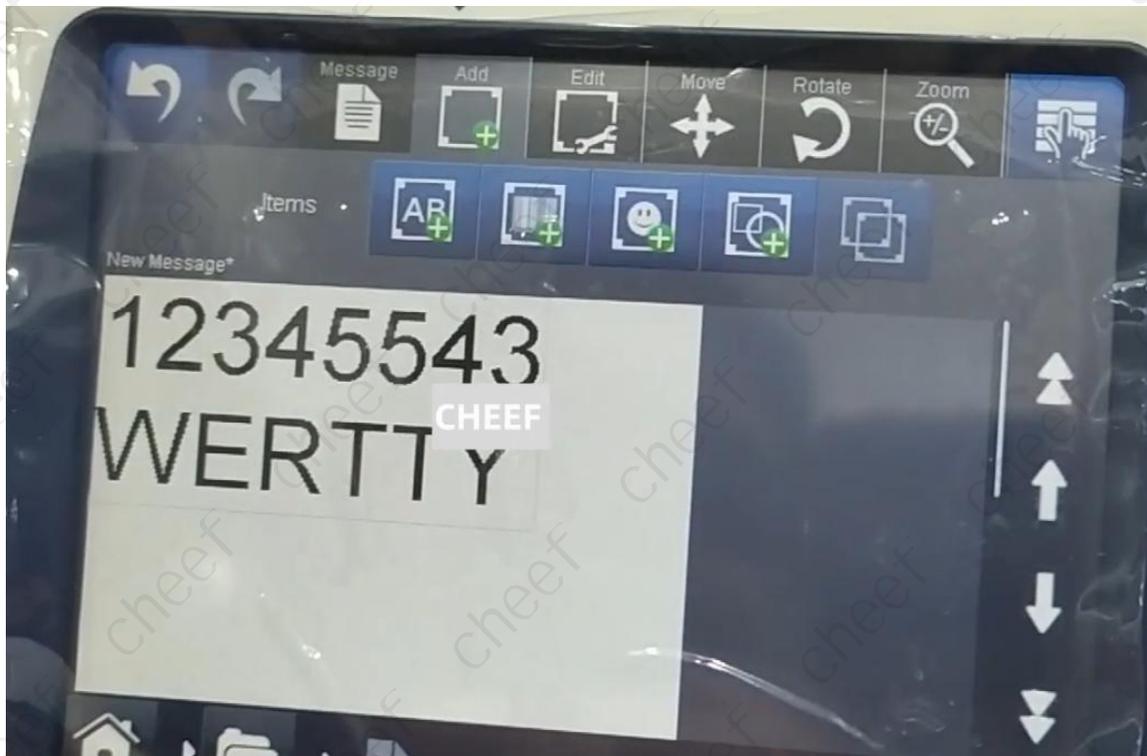

Introduction
The Domino V120i is a high-performance thermal transfer overprinter (TTO) widely used for labeling flexible packaging in industries such as food, beverage, and pharmaceuticals. This guide, based on the official YouTube video (https://youtu.be/pjZxRS4JoP4), provides detailed steps for editing print information (e.g., date, batch number, text) on the Domino V120i, helping users ensure accurate print content that meets production requirements.

Keywords: Domino V120i, thermal transfer overprinter, information setting, print content editing, industrial printing, equipment operation

1. Preparing for Information Editing
Before editing print information, complete the following preparations:
- **Check Equipment Status**: Ensure the Domino V120i is powered on and the control panel is functioning properly.
- **Prepare Print Content**: Determine the information to be printed (e.g., date, batch number, product name) and have the relevant data ready.
- **Confirm Software Support**: Verify whether editing will be done via the control panel or connected software (e.g., Domino QuickDesign).

## 2. Accessing the Information Editing Interface

The Domino V120i's control panel offers an intuitive interface for editing information:
- On the main control panel interface, locate the "Information Settings" or "Print Content" option (typically a text or edit icon).
- Press the corresponding button to enter the information editing menu.

## 3. Editing Print Content

Input or modify print content within the editing menu:
- Select the field to edit (e.g., date, batch number, custom text).
- Use the control panel's keyboard to input new content or import data via connected software.
- Set font, size, and print format (e.g., bold, alignment).
- Save the edited content and exit the menu.
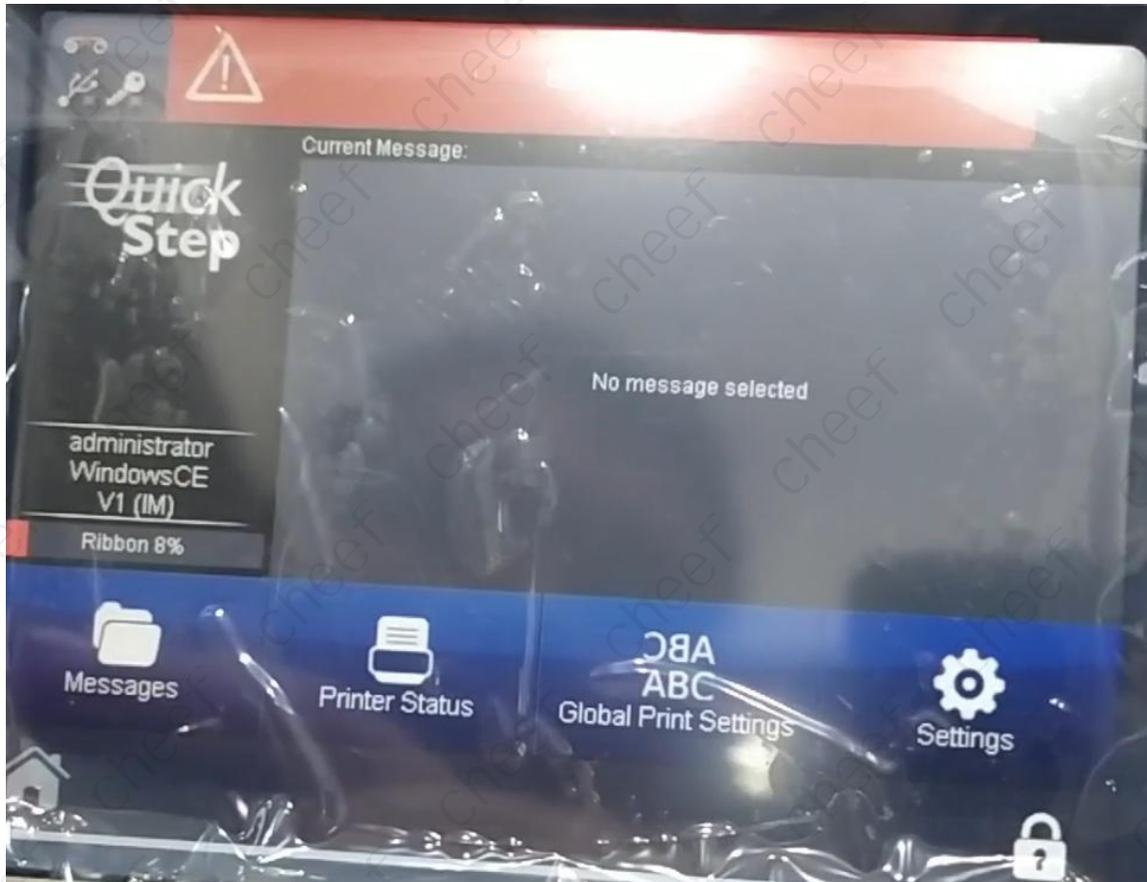

4. Testing and Verification

After editing, perform testing and verification:

- Run a test print to check if the printed content is accurate, clear, and meets expectations.

- If the content is incorrect, return to the editing interface to modify fields or formats.

- Ensure the print content aligns with production needs, such as date format or batch number sequence.

5. Common Issues and Solutions
- **Incorrect Print Content**: Verify the input data and ensure the correct field template is selected.
- **Abnormal Print Format**: Check font and format settings; adjust printhead pressure or ribbon tension if necessary.
- **Unable to Save Settings**: Confirm whether the control panel is locked; refer to the manual for unlocking instructions or restart the device.
