

Domino V120i Printer Keyboard Language Setting Guide

Introduction

The Domino V120i is a high-performance thermal transfer overprinter (TTO) widely used for labeling flexible packaging in industries such as food, beverage, and pharmaceuticals. This guide, based on the official YouTube video (<https://youtu.be/pjZxRS4JoP4>), provides detailed steps for setting the keyboard language on the Domino V120i, helping users customize the control panel for enhanced usability.

Keywords: Domino V120i, thermal transfer overprinter, keyboard language setting, equipment maintenance, industrial printing, user interface

1. Preparing for Language Setting

Before changing the keyboard language, complete the following preparations:

- ****Check Equipment Status****: Ensure the Domino V120i is powered on and the control panel is functioning.
- ****Verify Supported Languages****: Refer to the equipment manual or USB documentation to confirm available keyboard language options.

2. Accessing the Settings Menu

The Domino V120i' s control panel offers an intuitive settings interface:

- On the main control panel interface, locate the “Settings” or “System Settings” option (typically a gear icon).
- Press the “Settings” button to enter the system settings menu.

3. Selecting the Keyboard Language

Adjust the keyboard language within the settings menu:

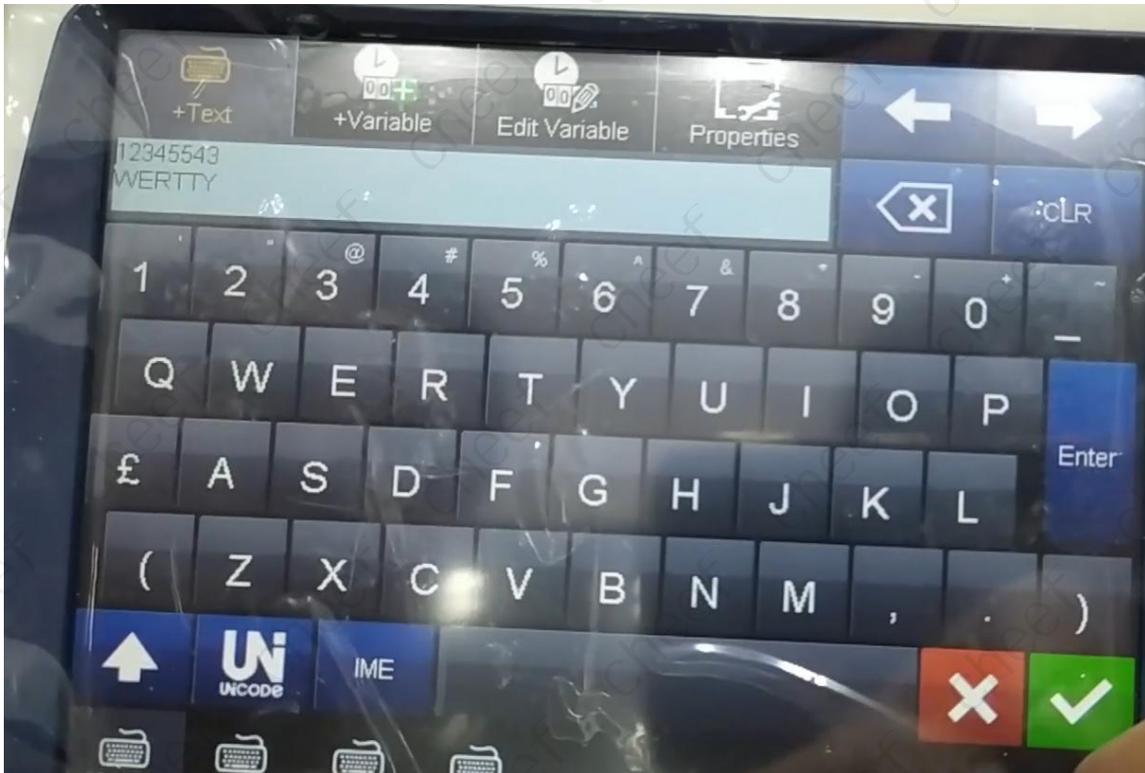

- Navigate to the “Language” or “Keyboard Settings” submenu.
- Browse the list of available languages and select the desired language (e. g. , English, Chinese).
- Confirm the selection and save the settings before exiting the menu.

4. Testing and Verification

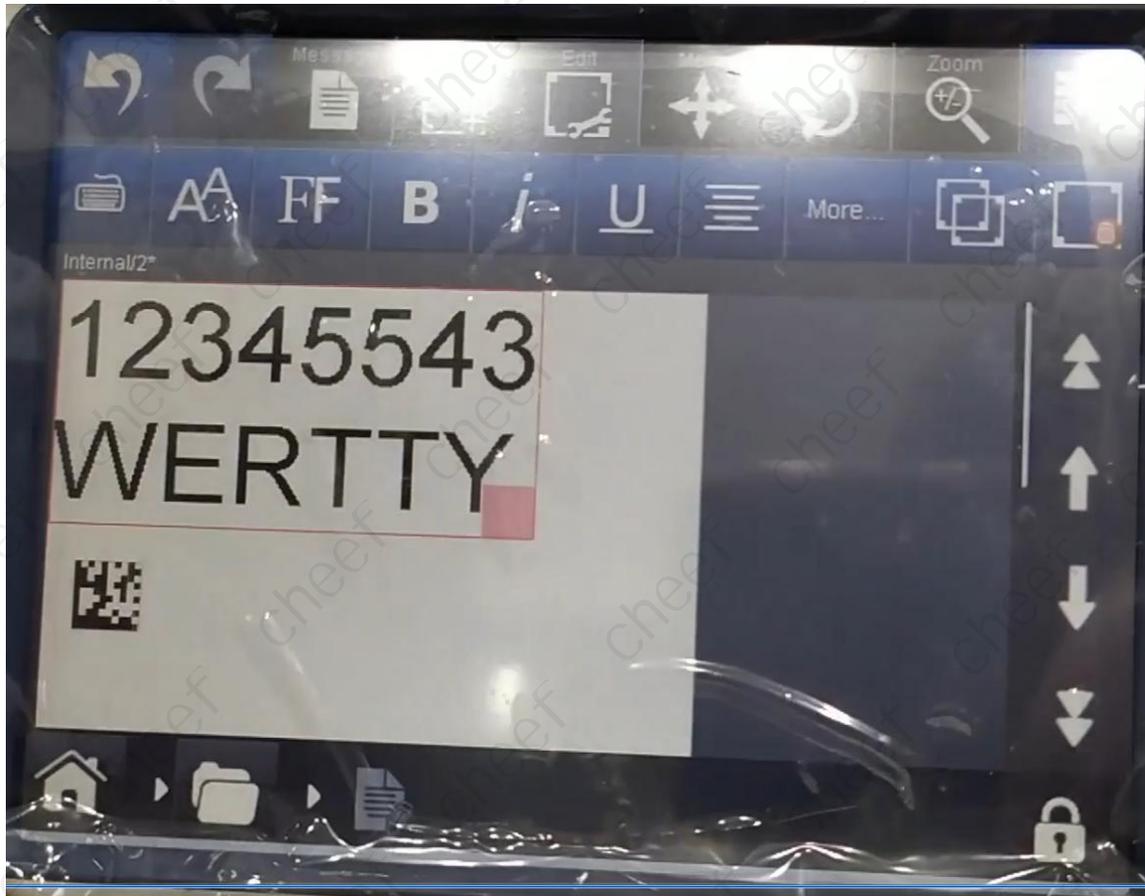

After setting the language, verify the changes:

- Return to the main interface and check if the control panel display language has updated.
- Input test text to ensure the keyboard input matches the selected language.
- If adjustments are needed, repeat the steps to select a different language.

5. Common Issues and Solutions

- **Language Not Updated**: Verify that settings were saved, or restart the device to apply changes.
- **Incorrect Keyboard Input**: Ensure the selected language matches the device's firmware-supported languages; contact technical support if needed.
- **Settings Menu Inaccessible**: Check if the control panel is locked and refer to the manual for unlocking instructions.
