

Domino VX150i TTO Login Password Guide

Introduction

The Domino VX150i Thermal Transfer Overprinter (TTO) is a high-performance industrial labeling device widely used in food, beverage, and pharmaceutical packaging. Logging into administrator mode is essential for accessing advanced settings and operations. This guide details the VX150i login password procedure, helping users quickly access administrator mode to configure the device.

Keywords: Domino VX150i thermal transfer overprinter login password administrator mode device settings

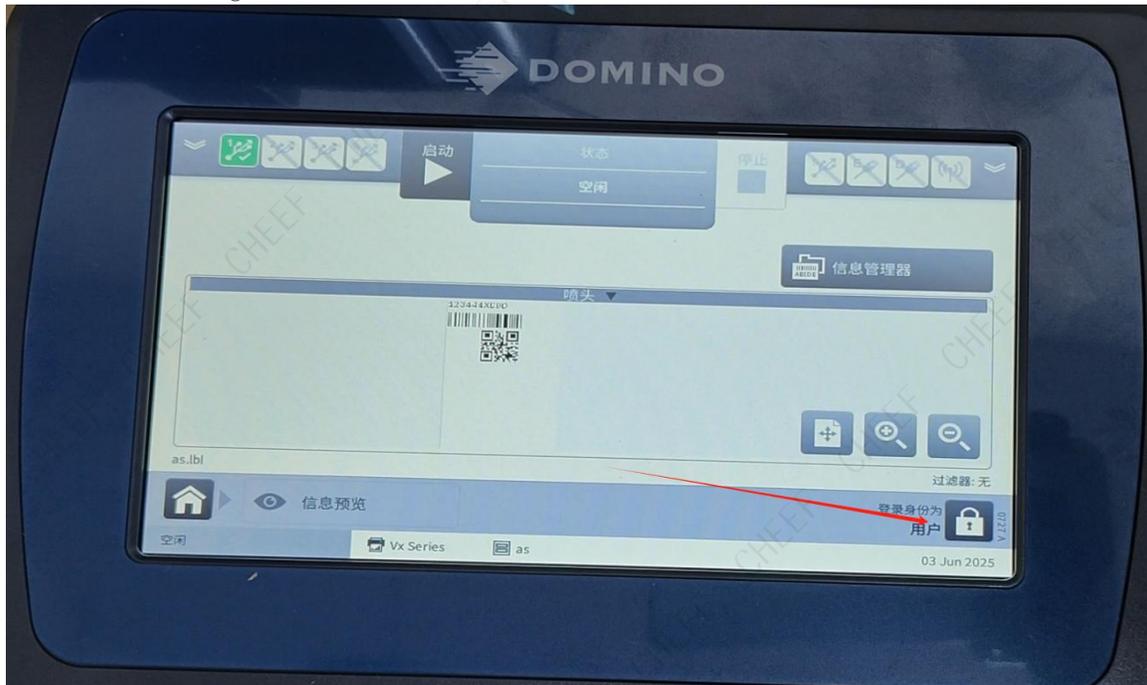

1. Overview of VX150i Login

The VX150i login process is completed through the settings menu on the device's display screen, using the administrator password to access the system. Proper login ensures users can access advanced features, such as parameter adjustments and system maintenance.

2. Login Steps

Step 1: Access the Settings Menu

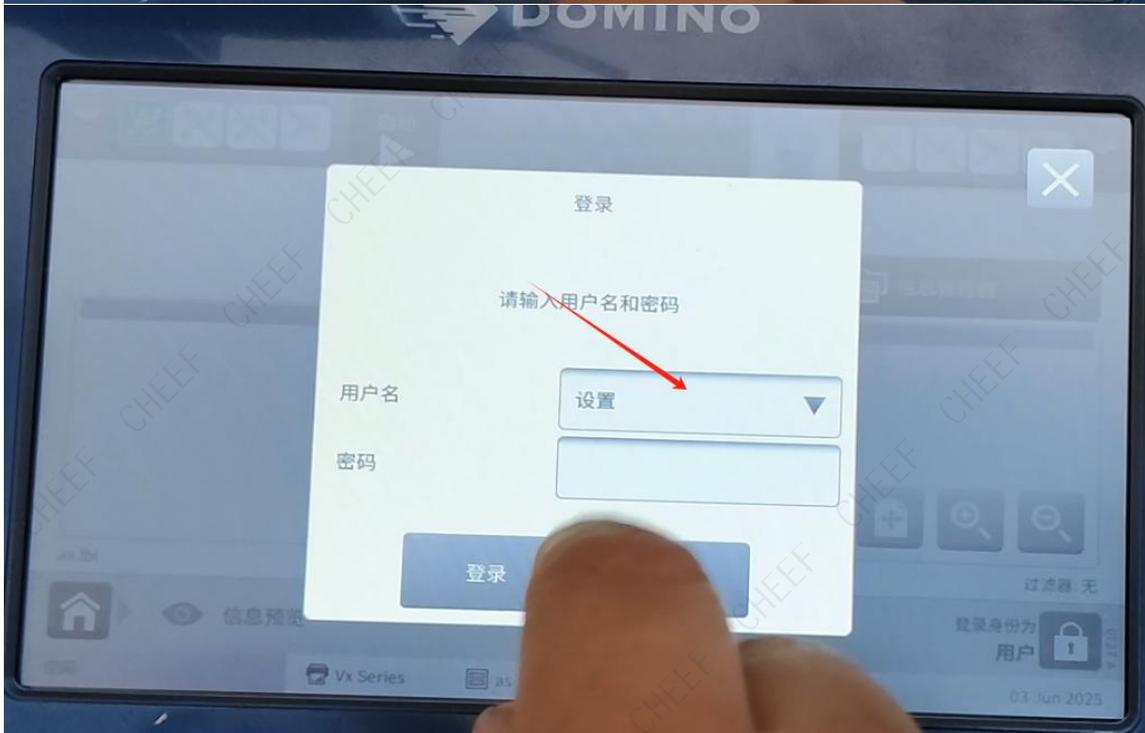

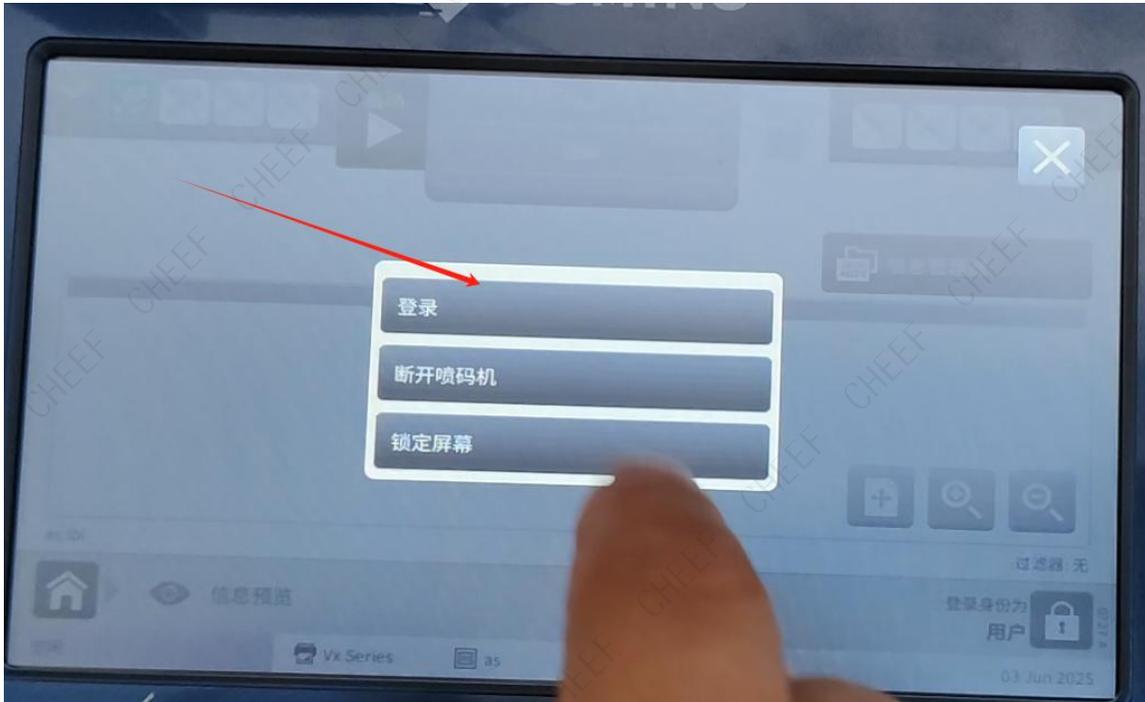

- Power on the VX150i printer, ensuring the display screen starts and shows the main interface.
- On the main interface, tap the "Settings" icon (often a gear or menu symbol) to enter the settings menu.

Suzhou Cheef Technology CO.,LTD

Step 2: Select Administrator Mode

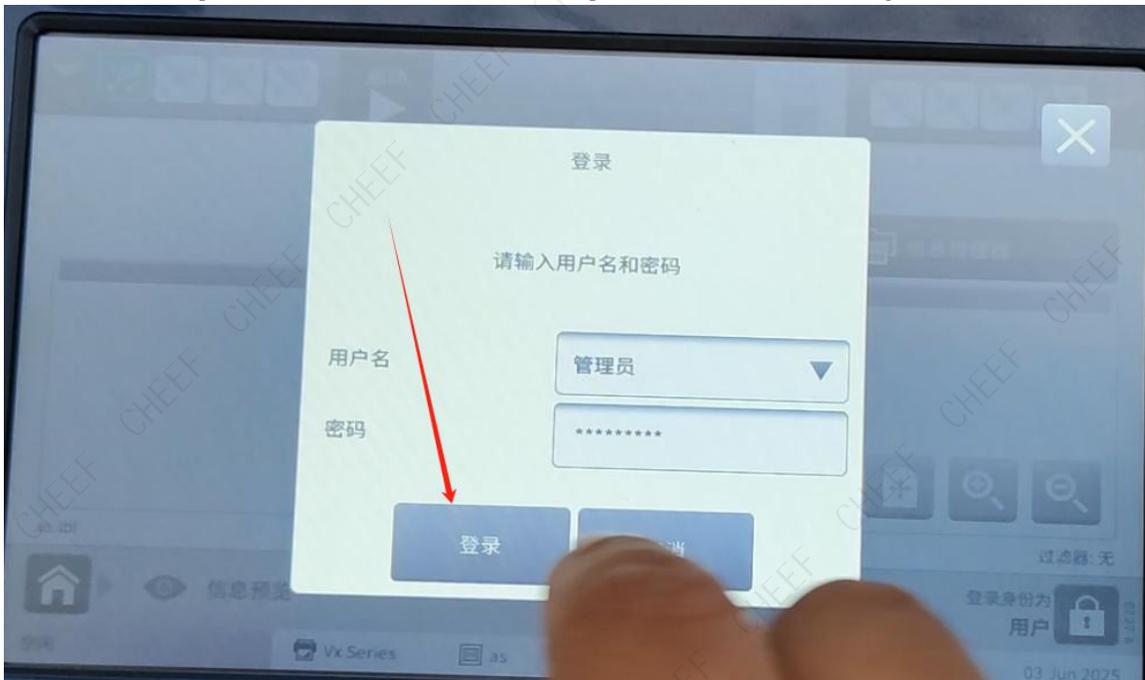

- In the settings menu, locate the “User Login” or “Administrator Mode” option.
- Tap this option to access the password entry interface.

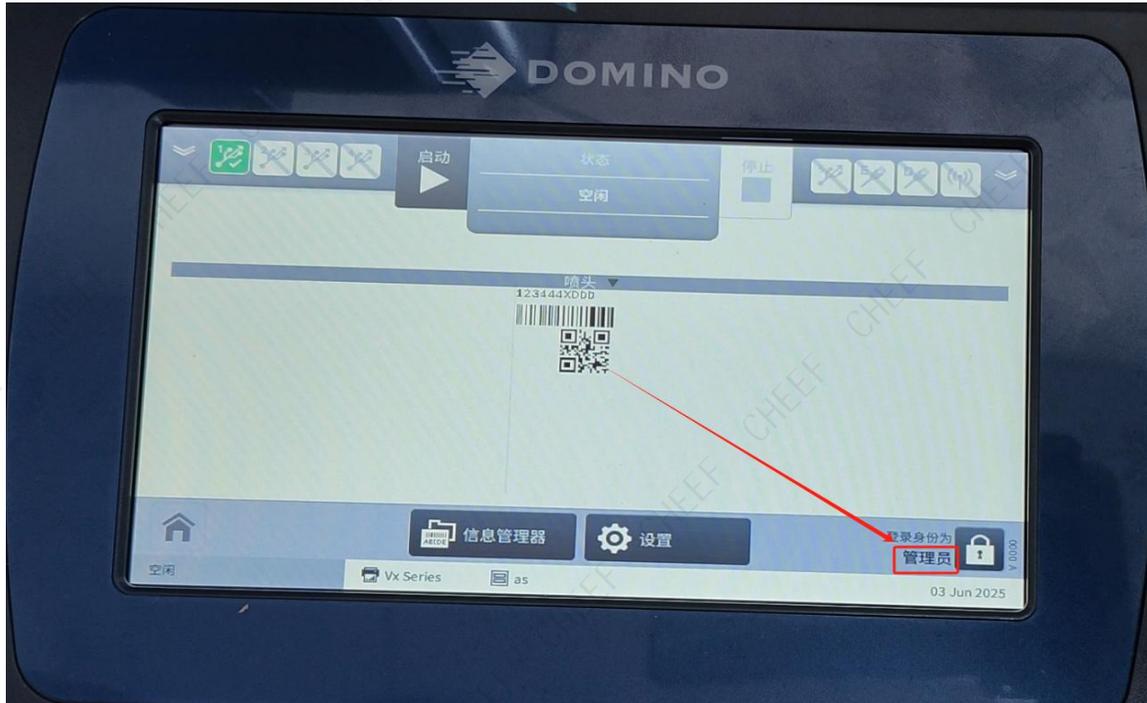

Step 3: Enter the Administrator Password

- On the password entry interface, use the on-screen keyboard to input the password: admiapiss (all lowercase).
- Confirm the password is correct, then tap “Confirm” or “Login.”

Step 4: Verify Login Status

- Upon successful login, the interface will switch to administrator mode, displaying advanced settings options.
- Check if restricted functions (e.g., parameter changes or system configuration) are accessible to confirm login.

3. Precautions

- The password “admiapiss” is case-sensitive and must be entered in all lowercase.
- If the password is incorrect, verify the keyboard input method or screen touch functionality.
- After logging into administrator mode, avoid modifying critical parameters unless familiar with the device’s functions.
- If login fails after multiple attempts, contact the supplier for technical support.

4. Common Questions and Answers

Question 1: What if I can’t log in after entering the password?

Answer: Ensure the password is “admiapiss” (all lowercase) and check for input errors. If it still fails, restart the device or contact the supplier.

Question 2: What if the administrator mode option doesn’t appear?

Answer: Confirm you’re in the correct settings menu, check the interface language settings, or refer to the device manual.

Question 3: What if I forget the password or need to reset it?

Answer: Contact the supplier for password reset guidance; avoid unofficial methods to prevent system damage.

5. Conclusion

The Domino VX150i login password procedure is simple and efficient, allowing quick access to administrator mode for advanced settings. By following this guide, users can easily complete the login process, optimizing device configuration and management.
