

How to Navigate the Menu of the Videojet 3640 Laser Marking Machine Software

Introduction

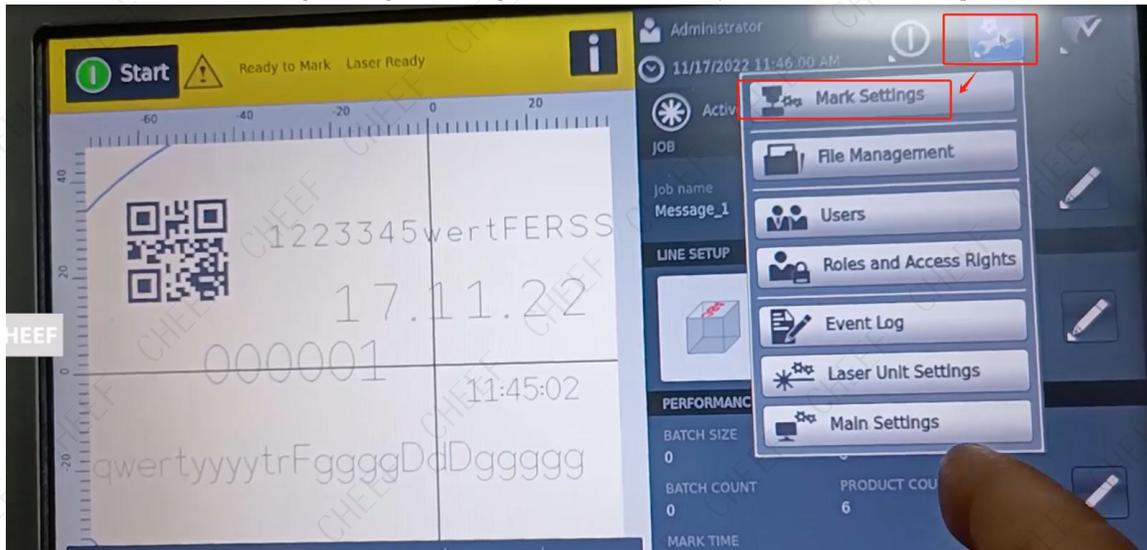

Understanding the menu structure of the Videojet 3640 laser marking machine software is essential for efficient operation and configuration. This guide provides a detailed walkthrough of accessing engraving settings, language selection, laser settings, file management, and other key menu features, ensuring both beginners and experienced operators can navigate the software with ease. Follow this tutorial to efficiently explore the Videojet 3640 menu to meet your needs.

Menu Navigation Guide

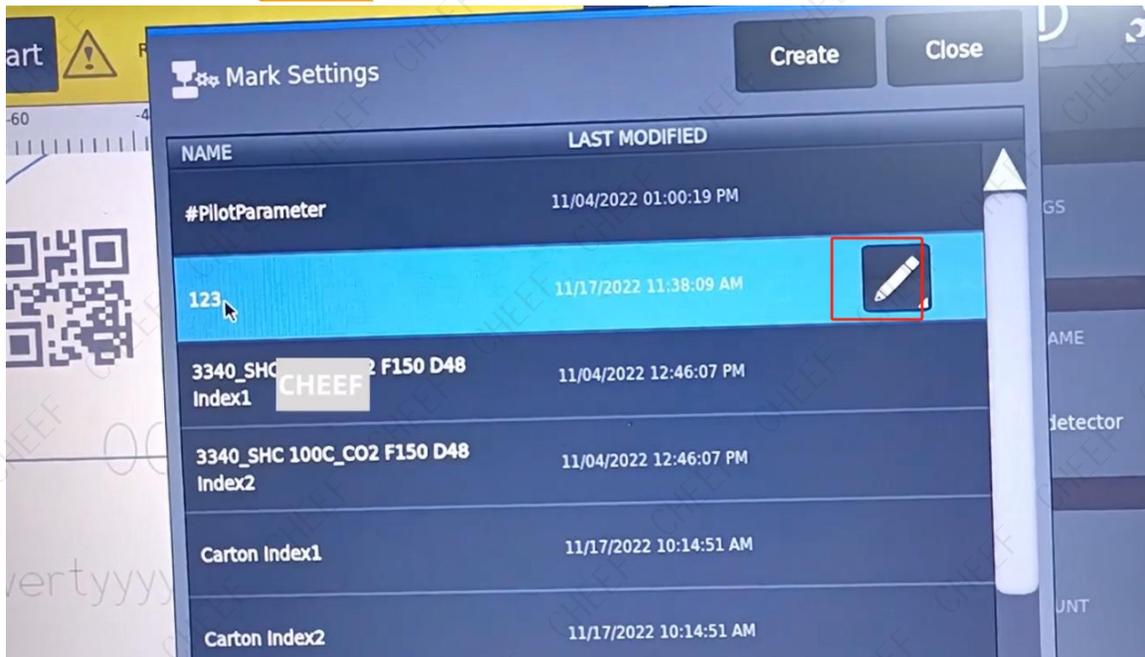

Accessing Engraving Settings

View and manage previously created engraving parameters.

- Launch the Videojet 3640 laser marking machine software and navigate to the main interface.
- In the main interface, locate the “Engraving Settings” option and click to view previously created parameters (e.g., “123” setting).
- Review the saved engraving settings to ensure they meet current requirements.

****Configuring Main Settings****

Adjust language, units, production line speed, and password-protected startup settings.

- In the main menu, select the “Main Settings” option.
- ****Language Selection****: Browse the list of available languages and choose the preferred language to optimize the user experience.
- ****Units and Production Line Speed****: Select appropriate units (e.g., millimeters) and production line speed as needed.
- ****Password Protection****: Understand that a password is required for each machine restart or startup to ensure secure operation.
- Save changes to apply the new settings.

Exploring Laser Settings

View date, time, and other less commonly used configurations.

- In the main menu, select the "Laser Settings" option.
- Check the displayed date and time settings, along with other advanced configurations (typically not adjusted frequently).
- Ensure these settings align with your operational needs, modifying only when necessary.

Managing Files and Statistics

Check file counts, production line speed, and message details.

- In the main menu, access the "Folder" option to view file statistics.
- Review production line speed (e.g., three configured speed options) and message content (e.g., three messages).
- Check the five message details within the engraving settings to ensure all content is correctly associated.

Reviewing Font Options

Explore the available system fonts for engraving.

- In the main menu or engraving settings, locate the “Fonts” option.
- Browse the list of multiple fonts provided by the system for personalized engraving content.
- Select the font that best suits your engraving needs.
